(54) DIGITAL CAMERA

(57)Abstract:

PROBLEM TO BE SOLVED: To properly attain consecutive shot in a fast timing by updating a shutter speed in a prescribed timing based on a vertical synchronizing signal.

SOLUTION: A TG 14 reads shutter speed data from a register 15a in response to a vertical synchronizing signal outputted from an SG 16 and controls exposure of a CCD imager at this shutter speed. Data in the register 15a are updated in a prescribed timing based on a vertical synchronizing signal. As a result, an object is consecutively photographed by different exposure values.

LEGAL STATUS

[Date of request for examination] 17.11.1999

[Date of sending the examiner's decision of rejection] 21.01.2003

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3443341

[Date of registration]	20.06.2003
[Number of appeal against examiner's decision of rejection]	2003-02560
[Date of requesting appeal against examiner's decision of rejection]	19.02.2003
